Ophthotech Enrolls First Patient in Phase 3 Clinical Trial of Fovista™ Anti-PDGF Therapy in Combination with Anti-VEGF Therapy for Wet AMD

New York, NY – August 29, 2013 – Ophthotech Corporation today announced the initiation of patient enrollment in a pivotal Phase 3 clinical trial of its lead compound Fovista™, an anti-platelet-derived growth factor (PDGF), which is being studied in combination with anti-VEGF therapy for the treatment of newly diagnosed patients with neovascular age-related macular degeneration (wet AMD).

The announcement marks the treatment of the first patient in the global Fovista Phase 3 clinical program, which consists of three clinical trials evaluating the safety and efficacy of the Fovista/anti-VEGF combination. The three trials are expected to enroll a total of approximately 1,866 patients at up to approximately 225 centers internationally.

About Ophthotech

Ophthotech is a biopharmaceutical company specializing in the development of novel therapeutics to treat diseases of the eye. The company's most advanced product candidate is Fovista™ anti-PDGF therapy, which it is developing for use in combination with anti-VEGF drugs that represent the standard of care for the treatment of wet age-related macular degeneration. Wet age-related macular degeneration is the leading cause of blindness in patients over the age of 55 in the United States and the European Union.
